

I'm a full featured Web Developer, with wide knowledge of front and backend development. Fluent in multiple programming languages and not afraid of learning new technologies.

My latest big development were for a local marketing agency, I'm was in charge of the systems they provided to clients such as Samsung Latinamerica and Fantastic Casinos. For the later I've developed:

- A sweepstakes system using NodeJS, AngularJS, Socket.io with a backend in Symfony and MySQL, with a memory cache using CouchBase, it has the capability to create a "room" and client's can connect to the room to see what the room owner is doing in the raffle (Viewing the prize list, Selecting a winner, etc.)
- An online/offline HTML app for registering new clients. It will load the required data on the first connection, and if the device (mobile or tablet) goes offline it will continue to work and when it gets back online will sync with the server. This App was developed using AngularJS and the Symfony

My skills covers:

- FrontEnd
 - HTML5
 - JS
 - Less
 - AngularJS
 - jQuery
 - offline.js
 - require.js
- BackEnd
 - PHP
 - NodeJS
 - ExpressJS
 - MongoDB
 - Socket.io
 - MySQL
 - Oracle (mostly PL/SQL, haven't used Developer or Forms, only used Oracle as Database)
 - Symfony (PHP Framework)
 - Silex (PHP Microframework)
 - Propel ORM
 - Ruby
 - .Net (Very rusted)
- Agile project management
